

Implementing The Hallmarks Of Aging In The Inspire T-cohort

Felipe Sierra and Jean-Marc Lemaitre

Implementing The Hallmarks Of Aging In The Inspire T-cohort

- A human cohort has little value if researchers don't mine the data
- The goal is to make the cohort more appealing to researchers
- The Inspire T cohort has a deep covering of clinical variables, and a rich biobank
- On the other hand, biological variables are explored only as a result of individual researcher's interests

GOAL: To measure hallmarks of aging in the entire cohort, as they are being developed by the geroscience community

Genome and Stem Cell Plasticity in Aging

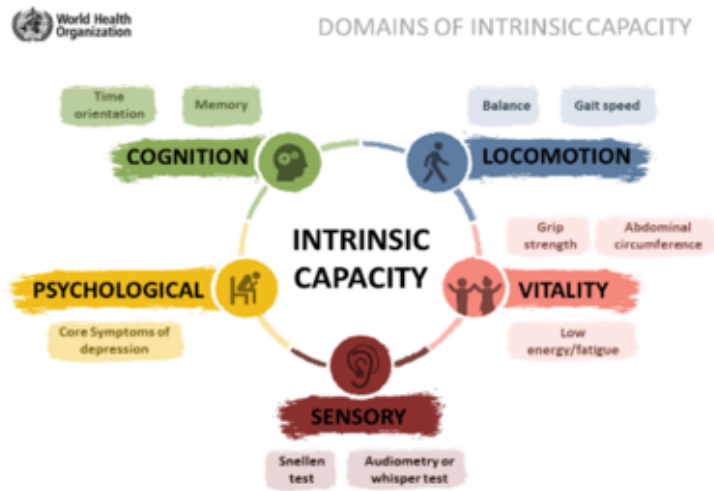

Co-Director IRMB Montpellier, France

OBJECTIVES

Cohort Inspire -T

Geriatrics

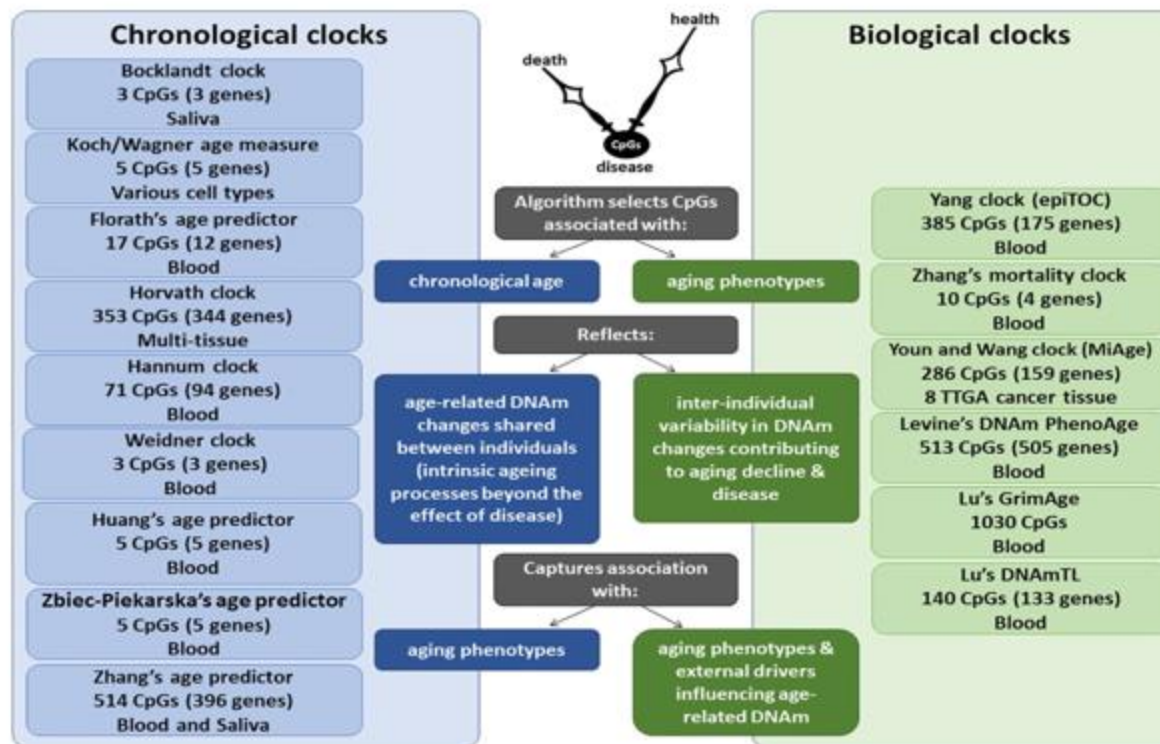

Geroscience

Senescence accumulation and epigenetic drift as potential readouts to evaluate aging progression

DNA methylation clocks diversity

AGE RANGE	SAMPLE SIZE	TISSUE	PLATFORM
18-70	68	Saliva	Illumina 27K
16-72	130	Various cell types	Illumina 27K
50-75	400	Blood	Illumina 450K
0-101	8000	Various cell & tissue types	Illumina 27K & 450K
19-101	656	Blood	Illumina 450K
0-78	575	Blood	Illumina 27K & 450K
9-75	89	Blood	Pyrosequencing
2-75	420	Blood	Pyrosequencing
2-104	13566	Blood & saliva	Illumina 450K & EPIC

AGE RANGE	SAMPLE SIZE	TISSUE	PLATFORM
19-101	656	Blood	Illumina 450K
31-82	1000	Blood	Illumina 450K
NA	4020	8 TTGA cancer cells	Illumina 450K
>20	9926	Blood	Illumina 27K, 450K & EPIC
NA (mean 66)	1731	Blood	Illumina 450K & EPIC
22-93	2256	Blood	Illumina 450K & EPIC

INSPIRE-T cohort for physiological aging evaluation

20 yo -100 yo
1000 volunteers

INSPIRE-T FRAiLTY Clock

PBMC DNA methylation Clocks

. Chronological age

. Biological age

FRAILTY

. Predicted age for
co-morbidities

. Predicted age of death

Implementing The Hallmarks Of Aging In The Inspire T-cohort

Clocks Are All the Rage

- Clocks are based on the analysis of omics signatures: DNA methylation, transcriptomics, proteomics, lipidomics, etc.
- A potentially productive view is to do the entire omics as we go along, rather than specialized subsets useful for available clocks:
 - Total DNA methylation: Horvath, but also others
 - Total transcriptome for iAGE, but also other analyses
 - Total proteome for Wyss-Coray's clock... and others
 - Et cetera

Implementing The Hallmarks Of Aging In The Inspire T-cohort

HALLMARK	Elements	Elements	Elements	Elements
Epigenetics	DNA Methylation	ncRNA	Histone modif	Transposable
Stem Cells	Proliferation	Plasticity	Regeneration	
Inflammation	Senescence	Cytokines	Resident macrophages	Microbiome
Metabolism	Mitochondria	Nutrition	Circadian	Energetics
Quality Control	DNA repair	Telomeres	Proteostasis	Autophagy
Plasticity	Stress response	Resilience	Regeneration	

Looking to the Future

Implementing The Hallmarks Of Aging In The Inspire T-cohort

The Plan

- We are starting with the « low hanging fruit »: the epigenetic clock (DNA methylation), through a collaboration with Jean-Marc Lemaître
- Immediately (because funds are available), we will also launch an effort on the inflammation clock (iAGE), through a collaboration with David Furman
- We are exploring a potential exploratory measurement on metabolism, using the Scenith technology. A collaboration between I2MC and INFINITY
- We are forming an international committee to help guide us on the selection of future hallmarks/measurements that could be of interest

Implementing The Hallmarks Of Aging In The Inspire T-cohort

In Summary

- We are poised to measure epigenetics (DNA methylation)
- In the near future, we are considering:
 - Immunological aging (iAGE)
 - Mitochondrial function aging (Scenith)
- Later, we might consider:
 - Microbiome
 - Cell Senescence
 - Autophagy
 - Telomeres
